Job reference: Front End Engineer Role

Please find herewith my CV for freelance work, as a Front End Engineer.

I have a proven track record of achievements in leading continuous improvement projects and exceeding the customer requirements. I have a passion for working as an online computer programmer. My last job till 2018 was with Airbus UK, manufacturing Airbus Aircrafts Wings. Airbus fly-by -wire technology has always fascinated me, controlling aircraft flight using computer programming.

It has been my desire to learn programming to solve complex engineering problems with a specialist Quality and Lean Six Sigma manufacturing background. In this bootcamp for front end developer with HyperionDev, I am learning JavaScript, HTML & CSS. I already have working knowledge of programming in Python and initially in Fortran, Basic and Pascal. I feel there are not many specialist manufacturing engineers with programming knowledge. With this combination, I have something unique to offer.

Graduated with a B.Sc. in Production Engineering from Leeds University, England. Have worked for thirty years with small and large automotive and aerospace manufacturing companies, as an engineer and manager.

Please refer to my over 60 coding projects on GitHub and I look forward to becoming a valuable contributor to your project.

Kind Regards,

Amjad Khan
